INFORMED CONSENT

While chiropractic care is remarkably safe, like any health care treatment, it does have some risks. It is your right as a patient to be informed of the potential risks of care so that you are fully informed in consenting to treatment.

The nature of the chiropractic adjustment - The primary treatment used by Doctors of Chiropractic is called spinal manipulative therapy. Your doctor may use his/her hands or a mechanical instrument upon your body in such a way as to move your joints. This may cause an audible "pop" or "click," much as you have experienced when you "crack" your knuckles. You may feel a sense of movement.

Analysis / Examination / Treatment - As a part of the analysis, examination, and treatment, a variety of tests and therapies may be used in your care including: spinal manipulative therapy, range of motion testing, muscle strength testing, ultrasound, radiographic studies (x-rays), palpation, orthopedic testing, postural analysis, basic neurological testing, hot/cold therapy, vital signs, EMS, ultrasound, spinal decompression therapy, and/or high intensity laser therapy.

The material risks inherent in chiropractic adjustment - As with any healthcare procedure, there are certain complications which may arise during chiropractic manipulation and therapy. These complications include but are not limited to: fractures, disc injuries, dislocations, muscle strain, cervical myelopathy, costovertebral strains and separations, and burns. Some types of manipulation of the neck have been associated with injuries to the arteries in the neck leading to or contributing to serious complications including stroke. Some patients will feel some stiffness and soreness following the first few days of treatment. Your doctor will make every reasonable effort during the examination to screen for contraindications to care; however, if you have a condition that would otherwise not come to our attention, it is your responsibility to inform the doctor.

The probability of those risks occurring - Fractures are rare occurrences and generally result from some underlying weakness of the bone which your doctor will check for during the taking of your history and during examination and x-ray. Stroke has been the subject of tremendous disagreement. The incidences of stroke are exceedingly rare and are estimated to occur between one in one million and one in five million cervical adjustments. *Statistically speaking, the risk of stroke from unknown causes in the general population actually exceeds the risk of stroke following a chiropractic adjustment*. The other complications are also generally described as rare.

Results - As with any health care option, we cannot guarantee any particular results from our chiropractic treatment. If during the course of care, we encounter non-chiropractic or unusual findings, we will advise you of those findings and recommend that you seek the services of another qualified health care provider.

The availability and nature of other treatment options - Other treatment options for your condition may include: self-administered, over-the-counter analgesics and rest; medical care and prescription drugs such as anti-inflammatory, muscle relaxants and pain-killers; hospitalization; surgery. There are risks and benefits with each of these options, and you may wish to discuss these risks and benefits with your primary medical physician.

The risks and dangers attendant to remaining untreated - Remaining untreated may allow the formation of adhesions and reduce mobility which may set up a pain reaction further reducing mobility. Over time, this process may complicate treatment making it more difficult and less effective the longer it is postponed.

PREGNANCY RELEASE – This is to certify that, to the best of my knowledge, I am not pregnant. I give my permission to perform x-ray evaluation with the understanding that x-ray can be hazardous to an unborn child. _____

(Patient Initials)

Having carefully read the above, I hereby give my informed consent to have the doctors of Innovative Health administer chiropractic care.
